Time Stamp-March 2014

Posted by admin on March 12, 2014

Time stamp images imprint a reference to which we match other concurrent events in our lives. Below are elements of a mid-March 2014 time stamp, with a theme of climate and weather.

Four snapshots excerpted from [Sailing](#) links:

The image displays four distinct web pages related to weather and space. The top-left page is a NOAA Hazardous Marine Condition (HMC) outlook for the western Lake Michigan region, dated Wednesday, February 5, 2014, at 10:34 PM EST. It provides a forecast for the following days, including overnight, Thursday, Thursday night, and Friday. The top-right page is a 'What's up in space' article from Wednesday, March 12, 2014, featuring a 'What's up in space' section with a 'What's up in space' button and a 'What's up in space' section. The bottom-left page is a National Weather Service forecast for New Buffalo, MI, showing a 7-day forecast with icons for snow, rain, and sun. The bottom-right page is a map of Southern Lake Michigan Surface Temperature, dated 3/10/2014 at 11:24 (EDT), showing temperature contours and cloud cover over the lake and surrounding areas.

Mid-march morning. After Jupiter within Gemini ensconced in a moon halo, two nights prior.

[Great Lakes MODIS imagery](#) shows ice and clouds over Lake Michigan, less scathed than SHE-- Superior, Huron, Erie. Courtesy of [NOAA Great Lakes CoastWatch-Great Lakes Node](#).

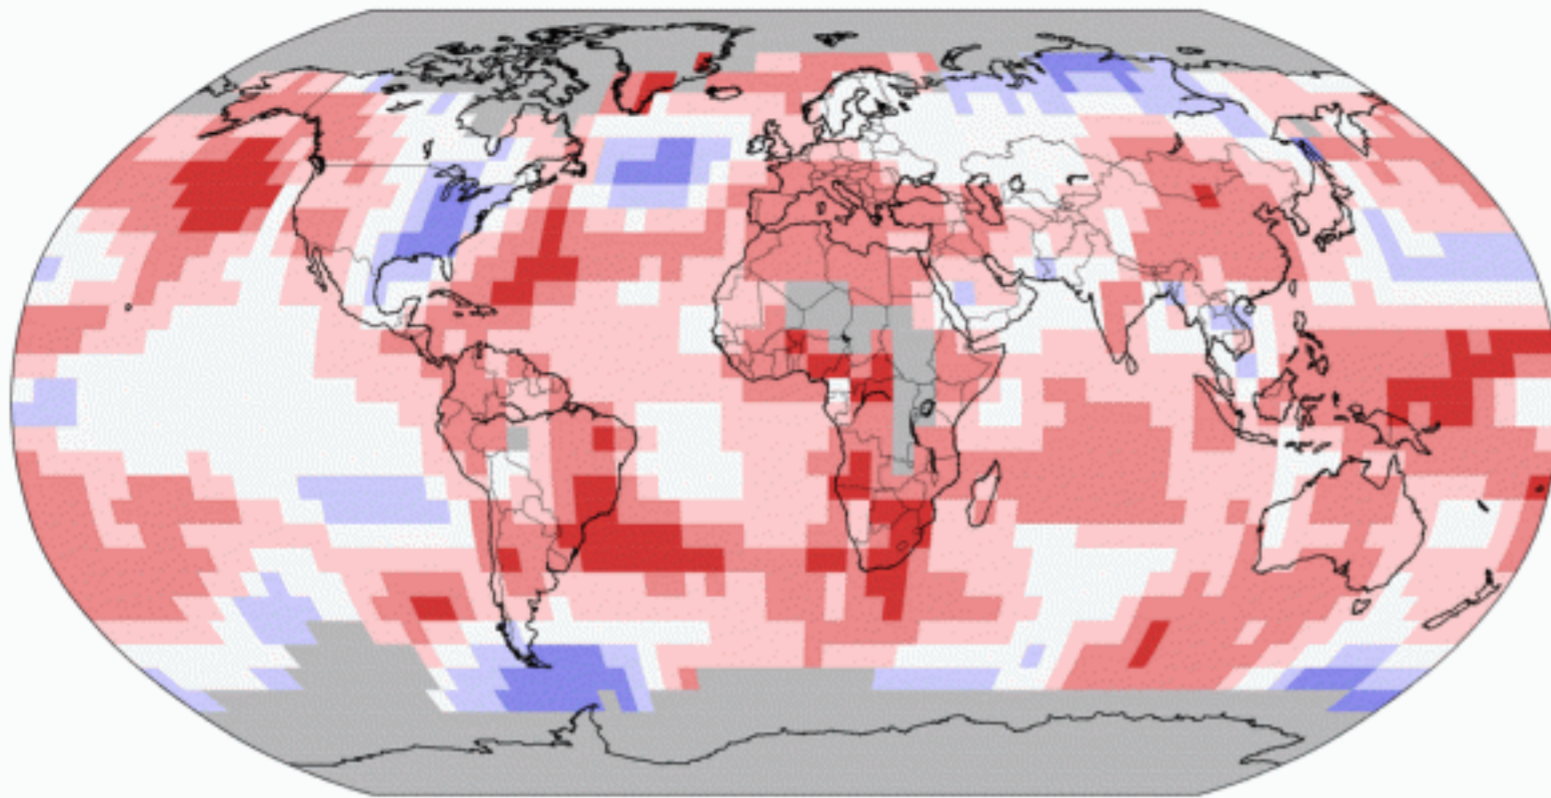

People will complain about the extended cold, but then deny the climate science. Count how many pixels are blue in the U.S. in this [global map of January 2014](#).
